

Dear Colleague,

In its effort to facilitate the exchange of knowledge and know-how, CAREX will organise its second field trip in Iceland on June 15-18, 2010. This event will provide an opportunity for up to 20 selected participants to interact in a field setting to deploy instruments, demonstrate the use of selected technologies, compare methodologies, exchange research experiences and help promote harmonisation of techniques and methodologies. Study sites include hot spring area and a glacier.

An online call for instruments is open until 1st of April (noon - French time). CAREX Steering Committee will select the instruments to be brought on site. Selection will be based on the relevance of the expected work as well as logistical issues. It has to be noted that the Committee will give priority to sampling and life detection instruments.

Selected participants will be contacted by the CAREX project Office by April 20, 2010. The project will cover travel, subsistence and logistic costs related to the participation of invited participants.
